Overview

- Campus talk is a mainstream platform like Reddit, but for college students.

- Problems: Reddit is a good platform for finding information, but it is diverse and messy.

- Solution: reduction of users (just for college students), more appealing to college students for their issues.

Ahn, Jamie

In-scope for version 1.0

- The solution will be available on a web browser

- Can be viewed on pc and mobile

- User can create an account

- Users can make posts

- Users can up-vote and down-vote posts

- Users can delete their own posts and comments

- Users can browse through a home page

Bailey

Out-of-Scope

- Making an app version for the website

- Following different users

- Following a specific forum (sub-reddit)

- No "Karma"

- No Trophies (Badges for achievements)

- No private messages between users

Solution Architecture

- Frontend: web for PC & Mobile

- Backend:
  - Services:
    Login, Post, Vote, Community, Search, Delete,...
  - Database: store
    users, posts, comments,...

- Testing

- Deployment

- Security

Summary & Conclusion

- Our project would bring a new way to communicate with students throughout your school without having to do so personally. This could help students gain a new method to ask students questions about classes, make friends and post about topics you can't on current social media. With the rejection of anyone that is not currently attending college, users feel much safer using the application and can get better answers for their problems.
